

RESOURCES

The **Statewide Cancer Prevention and Control Program (CPCP)** was the first formal collaboration between the South Carolina Cancer Center and the Hollings Cancer Center at the Medical University of South Carolina in Charleston. The CPCP stems from an initiative of Dr. James R. Hebert who, working with a group of dedicated researchers at both institutions, and with community leaders, built this program from the ground up. Dr. Hebert is now the Director of the South Carolina Statewide CPCP. Currently, the CPCP is housed physically at 2221 Devine Street, a USC-controlled building that is just east of the main USC campus and on the main route to the USC School of Medicine. The CPCP encompasses the Dietary Assessment Core for USC and it shares, as well as contributes to, all of the core resources of the SCCC, the constituent schools of the universities, and other centers and institutes with which it collaborates. Currently, the CPCP has about 70 affiliated faculty, nine full-time faculty, and about 36 staff. The CPCP is supported by more than 20 grants from federal agencies, other not-for-profit institutions, as well as pharmaceutical and other private-sector funding. The CPCP moved into its state-of-the-science office space in late July of 2005.
