QUESTIONS FROM VENDOR A

QUESTION #1

During the students move in and move out months:

- What size open tops are needed? How many at each site?
- Locations normally needed?
- Quantity of hauls?
- Tonnage of Hauls from these locations?

ANSWER #1

- 40 yard / Usually one at each site
- 5 different locations
- Approximately 2 per can during the week they are in place.
- An average of 2 tons per pull is estimated.

QUESTION #2

Could the University of South Carolina provide a history of the compactor and open top hauls from the Russell House and the Waste Pad sites, including Landfill tonnage?

ANSWER #2

The frequencies that are listed in the IFB are what we plan on. The average tonnage per pull at the Russell House can vary from less than one ton to 3 tons. The average tonnage per pull on the waste pad for MSW averages from 1 to 6 tons, and Yard waste can average from 1 to 18 tons.

QUESTION #3

What, if any, is the history of fines? How many fines were issued to the current hauler during their contract period?

ANSWER #3

To our knowledge...none
