## Definition of Angstrom $\AA$ <br> An Angstrom $\AA$ is a unit of length equal to $10^{-10}$ meters

1. Which is bigger a nanometer or an Angstrom? Answer: $\qquad$ Answer: nanometer
2. Which is bigger a picometer or femtometer? Answer: $\qquad$ Answer: picometer
3. Which is bigger a zeptometer or attometer? Answer $\qquad$ Answer: attometer
4. Which is bigger a exameter or petameter? Answer: $\qquad$
Answer: exameter
5. True or False $\AA=100$ picometres Answer: $\qquad$
Answer: True
Order of Magnitude: The number of times we would have to multiple or divide by 10 to convert one size to the other. Comparing numbers of widely different size we use Ratios!

Examples: Determine the order of magnitude difference in the sizes of the radii for:
(a) The solar system ( $10^{12}$ meter) compared with Earth ( $10^{7}$ meter)
(b) Protons ( $10^{-15}$ meter) compared with Milky Way ( $10^{21}$ meter)
(c) Atoms ( $10^{-10}$ meter) compared with neutrons ( $10^{-15}$ meter)

## Answer:

(a) $10^{12}$ meter $/ 10^{7}$ meter $=10^{5}$ Order 5 larger Solar system than Earth (b) $10^{21}$ meter/10 $0^{-15}$ meter $=10^{36}$ Order 36 larger Milky Way than Protons (c) $10^{-10}$ meter/10-15 meter $=10^{5}$ Order 5 larger Atoms than neutrons

For each of the following pairs, determine the order of magnitude difference:
6. The radius of the sun $\left(10^{9}\right.$ meters) and the radius of the Milky Way ( $10^{21}$ meters)

Ans: $\qquad$
Answers (a) order 12
7. The radius of a hydrogen atom ( $10^{-11}$ meter) and the radius
of a proton ( $10^{-15}$ meter)
Ans: $\qquad$
Answer order 4
8. How many orders of magnitude greater is a kilometer than a meter? Than a millimeter?

Ans: $\qquad$
Answer: Kilometer to meter order 3 and kilometer to millimeter order 6
9. An ant is roughly $10^{-3}$ meter in length and the average human roughly one meter. How many times longer is a human than an ant?

Ans: $\qquad$
Answer: $\mathbf{1 0}^{\mathbf{0}}$ meter $/ \mathbf{1 0}^{-\mathbf{3}}$ meter $=\mathbf{1 0}^{\mathbf{3}}$ Order 3 A human is of order 3 larger than an ant.
10. A millimeter and a gigameter

Ans: $\qquad$
Anwers: A millimeter and a gigameter $\mathbf{1 0}^{9} / 10^{-3}=10^{12}$ Order 12
See page SI METRIC PREFIXES No 13 for definitions of exa, peta, nano, pico, femto atto, zept etc.
