

# The Traits of All Trades

Students approaching the ninth grade began to consider educational possibilities in career choices. The Eden Career Technical Center offers specialized instruction so that students can get hands-on training in their desired fields. Trade school gave learners a head start in their career with the advanced resources needed to start their future career plans. By having an abundance of options such as nursing, cosmetology, collision repair, carpentry and welding, the ECTC provided students with the experience they needed to excel in their areas of study. Mastering skills can help them get their dream job quickly after graduation. “I chose business because I like to work with numbers. The idea of being in charge appeals to me because I am a good leader. My favorite part about this year was learning how to create websites and blog pages,” explained Amber Winters.
