Health Services Policy and Management

MHA Professional Format in Health Services Policy and Management

The Master of Health Administration (MHA) Professional Format program allows working healthcare professionals to obtain an advanced degree in health care administration, without interrupting full-time careers. The degree prepares students for advanced careers in the management of health services organizations in the private and public sectors, ranging from direct service providers (clinics, hospitals, long term care settings) through the ancillary industries (insurers, quality review organizations, pharmaceuticals and medical device manufacturers). Today's health care market requires individuals with the ability to balance regulatory issues, and offer value based care without compromising the quality of health care services rendered. In addition to the core public health disciplines, the MHA Professional Format provides training in leadership, management, accounting, finance, information technology, quantitative methods, innovation, decision-making, strategic planning and management for health care organizations.
